Awareness on Seasonal Diseases

Details of the Event:

Date of the Event	: 04-01-2025
Name of the Event	: Awareness on Seasonal Diseases
Venue	: AB Govt School
Time	: 11:00 AM to 12:00 PM
No. of Participants	: 19

Objective:

The objective of this program was to sensitize students, especially volunteers, about seasonal diseases, their causes, symptoms, and preventive measures. The initiative aimed to equip participants with the knowledge to identify early signs of seasonal illnesses, adopt proper hygiene practices, and promote health awareness both on and off-campus, thereby contributing to a healthier and more informed community.

Description:

On 4th January 2025, an awareness session on seasonal diseases was organized at AB Government School. The session took place from 11:00 AM to 12:00 PM and witnessed enthusiastic participation from student volunteers. Health officials and resource persons conducted the session, educating the students on the causes, symptoms, and preventive measures related to common seasonal illnesses. They emphasized the importance of personal hygiene, proper sanitation, and early medical intervention. The volunteers were also informed about how to spread awareness in their communities and encourage proactive health practices.

Outcome:

The program successfully raised awareness among the students about common seasonal diseases and the importance of preventive healthcare. Participants became more informed about the symptoms, causes, and necessary precautions to avoid infections during seasonal changes. Many students expressed their willingness to share this knowledge within their communities and promote healthy practices, thereby contributing to overall public health awareness.

Impact on Society:

This initiative significantly contributed to enhancing public awareness about seasonal diseases and the importance of timely prevention. By engaging students and spreading health-related knowledge, the program promoted community well-being and encouraged the adoption of hygienic practices. It is expected to lead to long-term positive behavioral changes, reduce the spread of infections, and strengthen public health efforts within the school and nearby communities.
